**Subject:** Environmental Safety of Malibu Schools' Rooms...

Dear Colleagues,

I just read the January 8, 2013 Malibu Times story: **Malibu High: Classrooms Cleaned, Reopened as School Resumes**

[http://www.malibutimes.com/news/article\\_b4043792-7825-11e3-b30b-0019bb2963f4.html](http://www.malibutimes.com/news/article_b4043792-7825-11e3-b30b-0019bb2963f4.html)

The story said that the PCB contaminated caulk has been ordered to be removed, and you have deemed all the "rooms safe."

**"...The [school] district has been ordered to remove all caulk containing PCBs... The EPA has deemed all Malibu High rooms safe..."**

A number of parents and concerned citizens have called/emailed me to ask for the supporting scientific test results that prove that all the rooms are safe.

I asked them to communicate their questions to you folks, since you are in charge.

However, I would be grateful if you could share the testing that proves that the dust and caulking, in all the rooms. are below the EPA action level of 50ppm.

Thank you in advance for your help in this matter.

Happy New Year, Hugh Kaufman
